

Getting to this...

...starts with the right seed

PF Olsen provides a seed supply service which can be customised to enable forest growers to select the most appropriate germplasm for both replanting and new planting. Customers can have unique seedlots designed to meet their site or end-use requirements. Seedlots can be produced with high ratings in specific traits such as growth and tree form, density, core-wood stiffness and dothistroma resistance.

*Female clones ripening in PF Olsen's control-pollinated seed orchard in Seddon, Blenheim.*

PF Olsen has been supplying control-pollinated (CP) pine seed since 1998 with consistently favourable feedback on customer service and seed performance.

Membership of Radiata Pine Breeding Co Ltd assures access to the best possible germplasm via the GF Plus™ seedlot certification scheme. Investment in new production methods has expanded our product range. PF Olsen can also supply the lower cost Stand Select™ seed which comes from existing commercial high GF-certified stands.

*By placing a bag over the cones, pollination can be controlled increasing the GF Plus ranking and making the seeds higher in value.*

If you want to find out more on PF Olsen's seeds that you should be investing in, contact Dawn Lewis, Treestock Manager on 07 921 7205 or 021 726 742 email [dawn.lewis@pfolsen.com](mailto:dawn.lewis@pfolsen.com)
